

What is ICEstripe?

ICEstripe is a collection of unique identifiers that contain personal data such as name, blood type, information about the disease which affects the ICEstripe holder, and most importantly - a contact number for a loved one, who should be notified in case of emergency.

Think how many times did you get out of the house without documents? Maybe you went to the store just opposite, or perhaps for a morning jog or bike? You worry when your child is late after school? Loved one suffering from Alzheimer's disease, or diabetes?

The phone can be destroyed and documents lost.

Who then will you be if you suddenly lose consciousness?

How will your family react if you are suddenly be gone without a trace?

Every year, thousands of people sent to hospital as a result of traffic accidents, sudden fainting, stroke and various diseases. The unconscious man can count only on the effectiveness of medical services that are not having any information on the injured person and have a very difficult task. ICEstripe is always in a prominent place such as the hands of the injured person. This allows rescuers to immediately receive basic information about casualties. A short record of blood type, or disease (e.g., diabetes) may in seconds properly guide the medical services, so they can take effective action. In addition, the contact number for a loved one, will notify the family of the breakdown event, and for more information about diseases and drugs taken by the patient. Even if by ICEstripe, you will gain a few seconds, remember that when it comes to saving lives, every second is precious. ICEstripe is your cheapest and most fashionable policy that never expires!

Why should I choose ICEstripe?

Because ICEstripe gives you the best chance for an accident to remain in-anonymous and to let your loved ones quickly receive information that happened to you. It is common to enter information ICE for mobile phones, but such a device as a phone is very easy to damage, especially if we are dealing with a traffic accident. Mobile is thus not ideal, you do not necessarily carry it with you during jogging or riding a bike, and if we add the possibility of a sudden switching off (PIN protection that rescuers do not know), discharge, or blocked, it may be that this is an extremely risky way to protect your data.

Some organizations promote carry a special card with ICE information. Unfortunately, it is also a bad option. The card can easily be damaged, it can also die in the jungle of the documents in your wallet or get lost in the house. ICEstripe is always in a prominent place such as the hands, rescue workers will not have to scour all of the pockets of your clothes, purse, backpack or wallet. If the time counts, medical professionals will be informed immediately who you are, what is your blood type, to which diseases are suffering, and who should be notified about what happened to you. Your data will be laser engraved on the badge of stainless steel. In this way, you can be sure that it will not break down, and when you will not be able to speak for yourself, your ICEstripe will hurry to your aid.

Remember, ICEstripe is not only a fashionable accessory, but also your best friend, who may save your life and save your family many worries!
